receiving data that forms a part of a modem-based data session;

communicating the data ~~session~~ via at least one communications path
traversing an asymmetric data network, wherein the at least one communications
path encapsulates the data in a virtual symmetric connection that couples at least
one remote access server to at least one enhancement platform; and ~~to at least one
enhancement platform~~;

processing the data ~~session~~ in the at least one enhancement cluster to
enhance a connection to a destination network.
